HUMAN GAMES CORP · A BIOLOGICAL BETTING COMPANY

FACECARD

Bet on real human faces.

Bet on real people's looks. **Dice, but human.**

It plays like the casino game Dice, except the roll is a human face. You set a line on the 1.00 to 10.00 scale, a face is dealt, and our neural aesthetic engine gives it a PSL score. If the score lands on your side, you win. You can bet under or over a line, inside a band, or on the exact number.

1.00 to 10.00	1.01x to 173.76x	96%	~6 s	Provably fair
THE PSL SCALE	THE PRICE RANGE	RTP, EVERY SELECTION	PER ROUND	THE SCORE IS DRAWN BEFORE THE FACE IS DEALT

HOW IT WORKS

01
Call it
Under or over a line on the PSL scale, a whole-number band, or the exact score. Set the stake and press Place bet.

02
The deal
The server draws one of 181 scores, each equally likely. The face that carries that PSL is dealt face down.

03
The scan
The card flips and the scanner reads the face: 478 landmarks, eight facial checks, 4.6 seconds (1.5 in Turbo). The score lands.

04
The settle
If the call was right, the player is paid the price shown on the button, floored to the currency. The controls unlock, and Auto starts the next round if it is on.

FOR OPERATORS

Adding FACECARD is a configuration change.

Wallet Seamless: your four JSON endpoints (authenticate, balance, transaction, cancel), signed with HMAC-SHA256. Money never leaves your system.

Variants RTP 96 (default), 94 or 92 per brand, plus player-protection flags: no Turbo, no Auto, no stake raise after a non-win, stop-loss required, no spacebar, or strict.
